MICROWAVE OVEN SAFETY

Your safety and the safety of others is very important.

We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

This is the safety alert symbol.
This symbol alerts you to hazards that can kill or hurt you and others.
All safety messages will be preceded by the safety alert symbol and the word “DANGER” or “WARNING.” These words mean:

DANGER

You will be killed or seriously injured if you don’t follow instructions.

WARNING

You can be killed or seriously injured if you don’t follow instructions.

All safety messages will identify the hazard, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

IMPORTANT SAFETY INSTRUCTIONS

When using electrical appliances basic safety precautions should be followed, including the following:

WARNING – To reduce the risk of burns, electric shock, fire, injury to persons or exposure to excessive microwave energy:

- Read all instructions before using the microwave oven.
- Read and follow the specific “PRECAUTIONS TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY” found in this section.
- The microwave oven must be grounded. Connect only to properly grounded outlet. See “GROUNDING INSTRUCTIONS” found in the “Installation Instructions” section.
- Install or locate the microwave oven only in accordance with the installation instructions.
- Some products such as whole eggs and sealed containers – for example, closed glass jars – may explode and should not be heated in the microwave oven.
- Use the microwave oven only for its intended use as described in this manual. Do not use corrosive chemicals or vapors in the microwave oven. This type of oven is specifically designed to heat, cook, or dry food. It is not designed for industrial or laboratory use.

As with any appliance, close supervision is necessary when used by children.

Do not operate the microwave oven if it has a damaged cord or plug, if it is not working properly, or if it has been damaged or dropped.

The microwave oven should be serviced only by qualified service personnel. Call an authorized service company for examination, repair or adjustment.

Do not cover or block any openings on the microwave oven.

Do not store the microwave oven outdoors. Do not use the microwave oven near water – for example, near a kitchen sink, in a wet basement, or near a swimming pool, and the like.

Do not immerse cord or plug in water.

Keep cord away from heated surfaces.

Do not let cord hang over edge of table or counter.

See door surface cleaning instructions in the “Caring for Your Microwave Oven” section.

MICROWAVE OVEN SAFETY

IMPORTANT SAFETY INSTRUCTIONS

- Do not operate any heating or cooking appliance beneath the microwave oven.
- Do not mount microwave oven over or near any portion of a heating or cooking appliance.
- Do not mount over a sink.
- Do not store anything directly on top of the microwave oven surface when the microwave oven is in operation.
- To reduce the risk of fire in the oven cavity:
  - Do not overcook food. Carefully attend the microwave oven if paper, plastic, or other combustible materials are placed inside the oven to facilitate cooking.

- Remove wire twist-ties from paper or plastic bags before placing bag in oven.
- If materials inside the oven should ignite, keep oven door closed, turn oven off, and disconnect the power cord, or shut off power at the fuse or circuit breaker panel.
- Do not use the cavity for storage purposes. Do not leave paper products, cooking utensils, or food in the cavity when not in use.

SAVE THESE INSTRUCTIONS

PRECAUTIONS TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

(a) Do not attempt to operate this oven with the door open since open-door operation can result in harmful exposure to microwave energy. It is important not to defeat or tamper with the safety interlocks.

(b) Do not place any object between the oven front face and the door or allow soil or cleaner residue to accumulate on sealing surfaces.

(c) Do not operate the oven if it is damaged. It is particularly important that the oven door close properly and that there is no damage to the:
   (1) door (bent),
   (2) hinges and latches (broken or loosened),
   (3) door seals and sealing surfaces.

(d) The oven should not be adjusted or repaired by anyone except properly qualified service personnel.
INSTALLATION INSTRUCTIONS

Before you begin operating the oven, carefully read the following instructions.

1. **Empty** the microwave oven and **clean** inside it with a soft, damp cloth. **Check** for damage such as a door that isn’t lined up correctly, damage around the door, or dents inside the oven or on the exterior. If there is any damage, do not operate the oven until an authorized service technician has checked it and made any needed repairs.

2. **Put** the oven on a cart, counter, table, or shelf that is strong enough to hold the oven and the food and utensils you put in it. *(The control side of the unit is the heavy side. Use care when handling the oven.)* The weight of the oven is about 40 lbs. The microwave oven should be at a temperature above 50°F for proper operation.

   **NOTE:** *(for model MT1130SG only)* You can build your microwave oven into a wall or cabinet by using one of the trim kits listed in the “Built-in kits” section.

   **NOTE:** Do not block the exhaust vents or air intake openings. Allow a few inches of space at the back and side of the oven where the exhaust vents are located. Blocking the exhaust vents could cause damage to the oven and poor cooking results. Make sure the microwave oven legs are in place to ensure proper airflow. If vents are blocked, a sensitive thermal safety device automatically turns the oven off. The oven will not work until it has cooled.

---

**WARNING**

Fire Hazard
Do not install the oven next to or over a heat source without a UL approved trim kit. Doing so can result in death, fire, or electrical shock.

---

**WARNING**

Electrical Shock Hazard
Plug into a grounded 3 prong outlet. Do not remove ground prong. Do not use an adapter. Do not use an extension cord. Failure to follow these instructions can result in death, fire, or electrical shock.

---

**ELECTRICAL REQUIREMENTS**

Observe all governing codes and ordinances. A 120 Volt, 60 Hz, AC only, 15 amp fused electrical supply is required. *(A time-delay fuse is recommended.)* It is recommended that a separate circuit serving only this appliance be provided.
GROUNDING INSTRUCTIONS

For all cord connected appliances:
The microwave oven must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. The microwave oven is equipped with a cord having a grounding wire with a grounding plug. The plug must be plugged into an outlet that is properly installed and grounded.

**WARNING** – Improper use of the grounding can result in a risk of electric shock.
Consult a qualified electrician or serviceman if the grounding instructions are not completely understood, or if doubt exists as to whether the microwave oven is properly grounded.

Do not use an extension cord. If the power supply cord is too short, have a qualified electrician or serviceman install an outlet near the microwave oven.

For a permanently connected appliance:
The microwave oven must be connected to a grounded, metallic, permanent wiring system, or an equipment grounding conductor should be run with the circuit conductors and connected to the equipment grounding terminal or lead on the microwave oven.
Microwave ovens are safe. Microwave energy is not hot. It causes food to make its own heat, and it’s this heat that cooks the food.

Microwaves are like TV waves, radio waves, or light waves. You cannot see them, but you can see what they do.

A magnetron in the microwave oven produces microwaves. The microwaves move into the oven where they contact food as it turns on the turntable.

The glass turntable of your microwave oven lets microwaves pass through. Then they bounce off a metal floor, back through the glass turntable, and are absorbed by the food.

Microwaves pass through most glass, paper, and plastics without heating them so food absorbs the energy. Microwaves bounce off metal containers so food does not absorb the energy.

HOW YOUR MICROWAVE OVEN WORKS

Radio interference

Using your microwave oven may cause interference to your radio, TV, or similar equipment. When there is interference, you can reduce it or remove it by:

- Cleaning the door and sealing surfaces of the oven.
- Adjusting the receiving antenna of the radio or television.
- Moving the receiver away from the microwave oven.
- Plugging the microwave oven into a different outlet so that the microwave oven and receiver are on different branch circuits.

For the best cooking results

- Always cook food for the shortest cooking time recommended. Check to see how the food is cooking. If needed, touch ADD MINUTE while the oven is operating or after the cooking cycle is over (see the “Using add minute” section).
- Stir, turn over, or rearrange the food being cooked about halfway through the cooking time for all recipes. This will help make sure the food is evenly cooked.
- If you do not have a cover for a dish, use wax paper, or microwave-approved paper towels or plastic wrap. Remember to turn back a corner of the plastic wrap to vent steam during cooking.

Testing your microwave oven

To test the oven put about 1 cup of cold water in a glass container in the oven. Close the door. Make sure it latches. Cook at 100% power for 2 minutes. When the time is up, the water should be heated.
TESTING YOUR DINNERWARE OR COOKWARE

Test dinnerware or cookware before using. To test a dish for safe use, put it into the oven with a cup of water beside it. Cook at 100% cook power for one minute. If the dish gets hot and water stays cool, do not use it. Some dishes (melamine, some ceramic dinnerware, etc.) absorb microwave energy, becoming too hot to handle and slowing cooking times. Cooking in metal containers not designed for microwave use could damage the oven, as could containers with hidden metal (twist-ties, foil lining, staples, metallic glaze or trim).

OPERATING SAFETY PRECAUTIONS

- Never lean on the door or allow a child to swing on it when the door is open.
- Use hot pads. Microwave energy does not heat containers, but the heat from the food can make the container hot.
- Do not use newspaper or other printed paper in the oven.
- Do not dry flowers, fruit, herbs, wood, paper, gourds, or clothes in the oven.
- Do not start a microwave oven when it is empty. Product life may be shortened. If you practice programming the oven, put a container of water in the oven. It is normal for the oven door to look wavy after the oven has been running for a while.
- Do not try to melt paraffin wax in the oven. Paraffin wax will not melt in a microwave oven because it allows microwaves to pass through it.
- Do not operate the microwave oven unless the glass turntable is securely in place and can rotate freely. The turntable can rotate in either direction. Make sure the turntable is correct-side up in the oven. Handle your turntable with care when removing it from the oven to avoid possibly breaking it. If your turntable cracks or breaks, contact your dealer for a replacement.
- When you use a browning dish, the browning dish bottom must be at least 3⁄16 inch above the turntable. Follow the directions supplied with the browning dish.
- Never cook or reheat a whole egg inside the shell. Steam buildup in whole eggs may cause them to burst, and possibly damage the oven. Slice hard-boiled eggs before heating. In rare cases, poached eggs have been known to explode. Cover poached eggs and allow a standing time of one minute before cutting into them.
- For best results, stir any liquid several times during heating or reheating. Liquids heated in certain containers (especially containers shaped like cylinders) may become overheated. The liquid may splash out with a loud noise during or after heating or when adding ingredients (coffee granules, tea bags, etc.). This can harm the oven.
- Microwaves may not reach the center of a roast. The heat spreads to the center from the outer, cooked areas just as in regular oven cooking. This is one of the reasons for letting some foods (for example, roasts or baked potatoes) stand for a while after cooking, or for stirring some foods during the cooking time.
- Do not deep fry in the oven. Microwavable utensils are not suitable and it is difficult to maintain appropriate deep-frying temperatures.
- Do not overcook potatoes. At the end of the recommended cooking time, potatoes should be slightly firm because they will continue cooking during standing time. After microwaving, let potatoes stand for 5 minutes. They will finish cooking while standing.

ELECTRICAL CONNECTION

If your electric power line or outlet voltage is less than 110 volts, cooking times may be longer. Have a qualified electrician check your electrical system.
Your microwave oven is designed to make your cooking experience enjoyable and productive. To help get you up and running quickly, the following is a list of the oven's basic features:

1. **One-Touch Door Open Button.** Push this button to open the door.

2. **Door Safety Lock System.** The oven will not work unless the door is securely closed.

3. **Window with Metal Shield.** The shield prevents microwaves from escaping. It is designed as a screen to allow you to view food as it cooks.

4. **Glass Turntable.** This turntable turns food as it cooks for more even cooking. It must be in the oven during operation for best cooking results. The turntable is sunken into the cavity floor to give you more cooking space and better cooking results.

5. **Removable Turntable Support** (under turntable).

6. **Control Panel.** Touch pads on this panel to perform all functions.

7. **Light** (not shown). Automatically turns on when the door is opened or when the oven is running.

8. **Cooking Guide Label.**

9. **Model and Serial Number Plate.**

**Cooking at Different Cook Powers**

For best results, some recipes call for different cook powers. The lower the cook power, the slower the cooking. Each Number pad also stands for a different percentage of cook power. Many microwave cookbook recipes tell you by number, percent, or name which cook power to use.

The following chart gives the percentage of cook power each Number pad stands for, and the cook power name usually used. It also tells you when to use each cook power. Follow recipe or food package instructions if available.

USING AUTO DEFROST

You can defrost food by choosing a category and setting a weight. AUTO DEFROST has preset times and cook powers for 3 categories: Meat, Poultry, and Fish.

To use AUTO DEFROST, follow the steps below:

1. TOUCH
   - MEAT
   - POULTRY
   - FISH

1 to 3 times to choose the type of food.

2. Touch Number pad(s) to enter the weight.

3. TOUCH
   - START
   - ENTER

This chart shows you how to choose a type of food and the weights you can set for each type. For best results, loosen or remove covering on food.

NOTES:
- If you enter a weight higher than the highest weight allowed for your food setting, one long tone will sound and "ERROR" will appear on the display when you touch START/ENTER.
- If you touch the AUTO DEFROST pad 4 times, the display returns to the Meat setting.
- See the “Auto defrost chart” later in this section for defrosting directions for each food.
- To defrost items not listed in the “Auto defrost chart,” use 30% cook power. Refer to a reliable cookbook for defrosting information.
- Twice during defrosting, 5 tones will sound. These tones tell you when to check, turn over, separate, or rearrange the food. See the “Auto defrost chart” later in this section for instructions on what to do when the tones sound. To start the oven again, touch START/ENTER.
**USING AUTO DEFROST (cont.)**

**Weight conversion chart**

You are probably used to food weights as being in pounds and ounces that are fractions of a pound (for example, 4 ounces equals \( \frac{1}{4} \) pound). However, in order to enter food weight in AUTO DEFROST, you must specify pounds and tenths of a pound.

If the weight on the food package is in fractions of a pound, you can use the following chart to convert the weight to decimals.

**Defrosting tips**

- **When using** AUTO DEFROST, the weight to be entered is the net weight in pounds and tenths of pounds (the weight of the food minus the container).
- **Before starting**, make sure you have removed any of the metal twist-ties which often come with frozen food bags, and replace them with strings or elastic bands.
- **Open containers** such as cartons before they are placed in the oven.
- **Always slit** or pierce plastic pouches or packaging.
- **If food is foil wrapped**, remove foil and place it in a suitable container.
- **Slit** the skins, if any, of frozen food such as sausage.
- **Bend** plastic pouches of food to ensure even defrosting.
- **Always underestimate** defrosting time. If defrosted food is still icy in the center, return it to the microwave oven for more defrosting.
- **The length** of defrosting time varies according to how solidly the food is frozen.
- **The shape of the package** affects how quickly food will defrost. Shallow packages will defrost more quickly than a deep block.
- **As food begins to defrost**, separate the pieces. Separated pieces defrost more easily.
- **Use small pieces of aluminum foil** to shield parts of food such as chicken wings, leg tips, fish tails, or areas that start to get warm. Make sure the foil does not touch the sides, top, or bottom of the oven. The foil can damage the oven lining.
- **For better results**, let food stand after defrosting. (For more information on standing time, see “Microwave cooking tips” in the “Cooking Guide” section.)
- **Turn over** food during defrosting or standing time. Break apart and remove food as required.
**USING ADD MINUTE**

ADD MINUTE lets you cook food for 1 minute at 100% cook power.

**NOTES:**
- Each time you touch ADD MINUTE, it will add 1 minute.
- You can enter ADD MINUTE only after closing the door or after touching OFF/CANCEL.
- You can only use ADD MINUTE to start the oven if no other cooking function is running.

1. Make sure your food is in the oven.

2. Touch add minute.
   Example when cooking for 1 minute:
   TOUCH
   ADD MINUTE
   once

3. At the end of the cooking time:
   (3 tones sound)
   TOUCH
   OFF
   CANCEL

   The display will show the time of day when you touch OFF/CANCEL.

---

**USING WARM HOLD**

You can safely keep hot, cooked food warm in your microwave oven for up to 60 minutes. You can use WARM HOLD by itself, or to automatically follow a cooking cycle.

**NOTES:**
- WARM HOLD operates for up to 60 minutes.
- Opening the oven door cancels WARM HOLD. Close the door and touch WARM HOLD, then touch START/ENTER if additional WARM HOLD time is desired.
- Food cooked covered should be covered during WARM HOLD.
- Pastry items (pies, turnovers, etc.) should be uncovered during WARM HOLD.
- Complete meals kept warm on a dinner plate should be covered during WARM HOLD.
- Do not use more than 1 complete WARM HOLD cycle (about 60 minutes). The quality of some foods will suffer with extended time.

1. Put hot, cooked food in the oven and close the door.

2. Touch warm hold.
   TOUCH
   WARM HOLD

3. Start the oven.
   TOUCH
   START ENTER

To make WARM HOLD automatically follow another cycle:
- While you are entering cooking instructions, touch WARM HOLD before touching START/ENTER.
- When the last cooking cycle is over, you will hear 2 tones. “Hold” will come on while the oven continues to run.
COOKING GUIDE

MICROWAVE COOKING TIPS

Amount of food
● If you increase or decrease the amount of food you prepare, the time it takes to cook that food will also change. For example, if you double a recipe, add a little more than half the original cooking time. Check for doneness and, if necessary, add more time in small increments.

Starting temperature of food
● The lower the temperature of the food being put into the microwave oven, the longer it takes to cook. Food at room temperature will be reheated more quickly than food at refrigerator temperature.

Composition of food
● Food with a lot of fat and sugar will be heated faster than food containing a lot of water. Fat and sugar will also reach a higher temperature than water in the cooking process.
● The more dense the food, the longer it takes to heat. “Very dense” food like meat takes longer to reheat than lighter, more porous food like sponge cakes.

Size and shape
● Smaller pieces of food will cook faster than larger pieces. Also, same-shaped pieces cook more evenly than different-shaped pieces.
● With foods that have different thicknesses, the thinner parts will cook faster than the thicker parts. Place the thinner parts of chicken wings and legs in the center of the dish.

Stirring, turning foods
● Stirring and turning foods spreads heat quickly to the center of the dish and avoids overcooking at the outer edges of the food.

Covering food
Cover food to:
● Reduce splattering
● Shorten cooking times
● Keep food moist
You can use any covering that lets microwaves pass through.

Releasing pressure in foods
● Several foods (for example: baked potatoes, sausages, egg yolks, and some fruits) are tightly covered by a skin or membrane. Steam can build up under the membrane during cooking, causing the food to burst. To relieve the pressure and to prevent bursting, pierce these foods before cooking with a fork, cocktail pick, or toothpick.

Using standing time
● Always allow food to stand after cooking. Standing time after defrosting and cooking allows the temperature to evenly spread throughout the food, improving the cooking results.
● The length of the standing time depends on how much food you are cooking and how dense it is. Sometimes it can be as short as the time it takes you to remove the food from the oven and take it to the serving table. However, with larger, denser food, the standing time may be as long as 10 minutes.

Arranging food
For best results, place food evenly on the plate. You can do this in several ways:
● If you are cooking several items of the same food, such as baked potatoes, place them in a ring pattern for uniform cooking.
● When cooking foods of uneven shapes or thickness, such as chicken breasts, place the smaller or thinner area of the food towards the center of the dish where it will be heated last.
● Layer thin slices of meat on top of each other.
● When you cook or reheat whole fish, score the skin – this prevents cracking.
● Do not let food or a container touch the top or sides of the oven. This will prevent possible arcing.

Using aluminum foil
Metal containers should not be used in a microwave oven. There are, however, some exceptions. If you have purchased food which is prepackaged in an aluminum foil container, refer to the instructions on the package. When using aluminum foil containers, cooking times may be longer because microwaves will only penetrate the top of the food.
If you use aluminum containers without package instructions, follow these guidelines:
● Place the container in a glass bowl and add some water so that it covers the bottom of the container, not more than ¼ inch high. This ensures even heating of the container bottom.
● Always remove the lid to avoid damage to the oven.
● Use only undamaged containers.
● Do not use containers taller than ¾ inch.
● Container must be at least half filled.
● To avoid arcing, there must be a minimum ¼ inch between the aluminum container and the walls of the oven and also between two aluminum containers.

continued on next page
MICROWAVE COOKING TIPS (cont.)

- Always place the container on the turntable.
- Reheating food in aluminum foil containers usually takes up to double the time compared to reheating in plastic, glass, china, or paper containers. The time when food is ready will vary depending upon the type of container you use.
- Let food stand for 2 to 3 minutes after heating so that heat is spread evenly throughout container.

Cooking you should not do in your microwave oven

- Do not do canning of foods in the oven. Closed glass jars may explode, resulting in damage to the oven.
- Do not use the microwave oven to sterilize objects (baby bottles, etc.). It is difficult to keep the oven at the high temperature needed for safe sterilization.

CARING FOR YOUR MICROWAVE OVEN

To make sure your microwave oven looks good and works well for a long time, you should maintain it properly. For proper care, please follow these instructions carefully.

For interior surfaces: Wash often with warm, sudsy water and a sponge or soft cloth. Use only mild, non-abrasive soaps or a mild detergent. Be sure to keep the areas clean where the door and oven frame touch when closed. Wipe well with clean water. Over time, stains can occur on the surfaces as the result of food particles spattering during cooking. This is normal. For stubborn soil, boil a cup of water in the oven for 2 or 3 minutes. Steam will soften the soil. To get rid of odors inside the oven, boil a cup of water with lemon juice or vinegar.

For exterior surfaces and control panel: Use a soft cloth with spray glass cleaner. Apply the spray glass cleaner to the soft cloth; do not spray directly on the oven.

NOTE: Abrasive cleansers, steel-wool pads, gritty wash cloths, some paper towels, etc., can damage the control panel and the interior and exterior oven surfaces.

To clean turntable and turntable support, wash in mild, sudsy water; for heavily soiled areas use a mild cleanser and scouring sponge. The turntable and turntable support are dishwasher-safe.
### QUESTIONS AND ANSWERS

<table>
<thead>
<tr>
<th>QUESTIONS</th>
<th>ANSWERS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Can I operate my microwave oven without the turntable or turn the turntable over to hold a large dish?</td>
<td>No. If you remove or turn over the turntable, you will get poor cooking results. Dishes used in your oven must fit on the turntable.</td>
</tr>
<tr>
<td>Can I use a rack in my microwave oven so that I may reheat or cook on two levels at a time?</td>
<td>You can use a rack only if the rack is supplied with your microwave oven. If you use a rack not supplied with the microwave oven, you can get poor cooking performance and/or arcing.</td>
</tr>
<tr>
<td>Can I use either metal or aluminum pans in my microwave oven?</td>
<td>You can use aluminum foil for shielding (use small, flat pieces), small skewers, and shallow foil trays (if tray is not taller than 1.9 cm [3/4 inch] deep and half filled with food to absorb microwave energy). Never allow metal to touch walls or door.</td>
</tr>
<tr>
<td>Is it normal for the turntable to turn in either direction?</td>
<td>Yes. The turntable rotates clockwise or counterclockwise, depending on the rotation of the motor when the cooking cycle begins.</td>
</tr>
<tr>
<td>Sometimes the door of my microwave oven appears wavy. Is this normal?</td>
<td>This appearance is normal and does not affect the operation of your oven.</td>
</tr>
<tr>
<td>What are the humming noises that I hear when my microwave oven is operating?</td>
<td>You may hear the sound of the transformer when the magnetron tube cycles on.</td>
</tr>
<tr>
<td>Why does the dish become hot when I microwave food in it? I thought that this should not happen.</td>
<td>As the food becomes hot it will conduct the heat to the dish. Be prepared to use hot pads to remove food after cooking.</td>
</tr>
<tr>
<td>What does “standing time” mean?</td>
<td>“Standing time” means that food should be removed from the oven and covered for additional time to allow it to finish cooking. This frees the oven for other cooking.</td>
</tr>
<tr>
<td>Why does steam come out of the air exhaust vent?</td>
<td>Steam is normally produced during cooking. The microwave oven has been designed to vent this steam out the vents.</td>
</tr>
<tr>
<td>Can I pop popcorn in my microwave oven?</td>
<td>Yes. Pop packaged microwave popcorn following manufacturer’s guidelines or use the preset POPCORN pad. Do not use regular paper bags. Use the “listening test” by stopping the oven as soon as the popping slows to a “pop” every 1 or 2 seconds. Do not repop unpopped kernels. Do not pop popcorn in glass cookware.</td>

TROUBLESHOOTING

Most cooking problems often are caused by little things you can find and fix without tools of any kind. Check the lists below before calling for assistance or service. If you still need help, see the “Requesting Assistance or Service” section.

IF MICROWAVE DOES NOT OPERATE, FIRST CHECK THE FOLLOWING:

- Is the microwave plugged into a live outlet with the proper voltage? (See installation instructions.)
- Have you blown a household fuse or tripped a circuit breaker?
- Has the electric company experienced a power failure?
